STEALTH™

Stealth(aware)™

Total Threat Visibility

HIGHLIGHTS

- ***Know your network*** *with live discovery and state-of-the-art visualization of endpoints and workloads and their communications to prioritize security needs*
- ***Reduce network management complexity*** *with built-in contextual intelligence that can be customized to create profile types unique to your environment*
- ***Control network access*** *by identifying rogue and unwanted communications*
- ***Easily create and update security policies*** *on the fly with an intuitive user interface*
- ***Enhance compliance*** *with automatic modeling and deployment of security policies to meet regulatory mandates*

Unisys Stealth Software Suite

Agilient has partnered with Unisys to distribute Stealth in Australia. Stealth is a flexible software suite trusted by government and commercial organizations that transforms an existing network into a Zero Trust Network, preventing or mitigating the impact of cyberattacks from inside and outside the perimeter using encryption, cloaking and software-defined microsegmentation based on trusted identities.

Take Control of Your Network

Security monitoring and response teams are struggling to maintain visibility in an increasingly borderless IT environment with the growing volume and variety of devices, users and data moving across networks. Assumptions-based security decisions lead to the possibility of unaddressed vulnerabilities. To reduce your risk exposure and quickly respond to attacks, you need complete visibility into your network.

Part of the Unisys Stealth® security software suite, Stealth(aware)™ is locally distributed by Agilient and provides you with powerful live discovery, modeling and visualization to see network relationships and use microsegmentation to isolate trusted entities. Increased traffic insight informs your decisions to permit, restrict or block access to sensitive data—then automatically deploy those policies to endpoints.

Visualize and Model Using Powerful Live Discovery

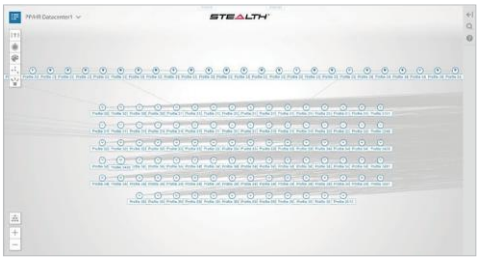
Stealth(aware) allows you to visually discover endpoints and workloads on your network, as well as their communications using live discovery or existing packet capture files (pcap). It enables you to create new network models from scratch to visualize new environments.

Simplify with Contextual Intelligence

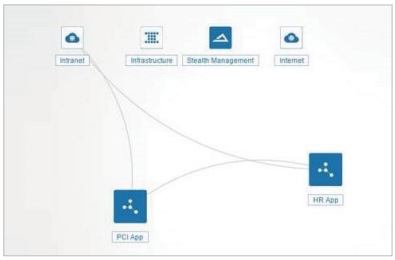
To cut through network complexity, Stealth(aware) contextual intelligence combines rule-based and machine learning approaches to classify and cluster nodes for easy identification of network assets and data flows. Adjustable granularity levels balance simplicity and details, and you can customize classification criteria to support the creation of profile types unique to your environment.

Visually Define and Enforce Security Policies

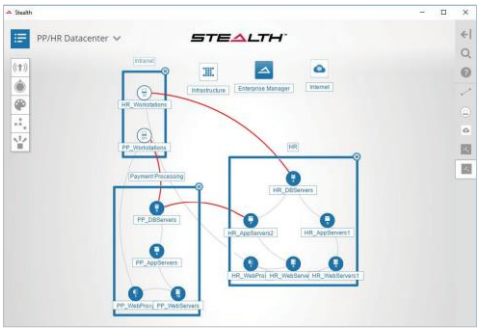
With a single click, your network map transforms into a model of microsegmentation policies. A simple and intuitive user interface allows you to update and create new policies on the fly. To accelerate network protection and compliance, security policies are automatically deployed. Stealth(aware) keeps your network view current by refreshing network maps to identify policy violations or unwanted and suspicious communications, allowing you to quickly create and update security policies to block them.



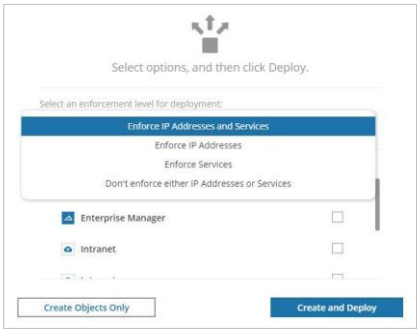
1. Discover your network



2. Model security policies with customizable contextual intelligence



3. Identify and stop rogue communications



4. Deploy and update security policies on the fly

SYSTEM REQUIREMENTS	
Hardware	8 GB RAM or greater Intel Core i5 or equivalent 500 MB disk space (minimum)
Screen resolution	1366 × 768 (minimum) 1920 × 1080 (recommended)
Workstation operating system	Windows 7 x64 or above
Server operating system	Windows Server 2012 R2 x64 or Windows Server 2016

Why UNISYS and Agilient?

In our digital world, critical applications and systems deliver vital access to energy, transportation, financial services and healthcare as well as strong national security and defense. Industry-leading organizations trust Unisys to maximize security posture across IT, OT and production environments. Unisys Security Solutions and Agilient combine expert consulting, advanced technologies and managed services that span the entire security lifecycle.
